EVAN DEAVER

Data Analyst | Business Intelligence | AI Data Quality

Remote, US | edeaver06@gmail.com | Portfolio: github.com/edeaver06/Data_Analytics_Portfolio | LinkedIn | Tableau | Kaggle

PROFESSIONAL SUMMARY

Google-certified Data Analyst working in SQL, Python, R, and Excel. Builds tested data pipelines (DuckDB, dbt, pytest), measures forecast accuracy, publishes 6 interactive Streamlit data apps and Tableau dashboards, and performs data QA on AI model outputs.

TECHNICAL SKILLS

- **Languages & Querying:** SQL (Google BigQuery, PostgreSQL, DuckDB), Python (pandas, pytest), R (Tidyverse, ggplot2), Advanced Excel (Pivot Tables, Power Query, XLOOKUP)
- **BI & Visualization:** Tableau (Tableau Public), Streamlit, Power BI, Dashboards, Metric Reporting
- **Data Quality & AI Operations:** Data Validation & Reconciliation, Anomaly Detection, Automated Testing (pytest), Human-in-the-Loop (HITL) Model Evaluation, Multimodal Data Annotation
- **Pipelines & Forecast Scoring:** dbt, DuckDB, REST APIs (Polymarket, Kalshi), Brier Scores

FEATURED ANALYTICS PROJECTS

Steam Pulse: Steam Player Analytics | Python, DuckDB, dbt, Streamlit | App

- In a snapshot on Oct 12, 2026, 6.22M players across 1,029 games: the top 10 games held 40.1% of players, and games had about 44% fewer players a month after their launch month.
- Built a Python pipeline pulling Steam APIs into DuckDB, modeled with dbt (65 passing tests) and built to run on a schedule, with an interactive Streamlit app.

Markets vs Polls: 2024 Election Forecast Accuracy | Python, REST APIs, DuckDB, SQL, pytest | App

- Compared prediction markets vs. poll averages across 35 states: markets had slightly lower error one day out (Brier 0.042 Polymarket, 0.043 Kalshi vs. 0.053 polls) and called 33 of 35 states vs. 31 for polls; with one election, the difference isn't statistically clear.
- Pulled Polymarket and Kalshi data through REST APIs into DuckDB and scored forecasts with Python and SQL, with pytest tests.

Olist E-Commerce Delivery & Reviews Analysis | SQL, Python, automated tests | App

- Across 99,441 orders, late deliveries had lower review scores (3.78 vs. 4.29 stars among reviews written after delivery), and lower-tier sellers ran late more often (9.6% vs. 6.85%).
- Built with a SQL pipeline and Python analysis, verified by 70 passing automated tests.

More projects with apps: Is the Market's Closing Price an Accurate Forecast?, Google Fiber FCR, Aircraft Readiness; Tableau dashboards and code: Portfolio

PROFESSIONAL EXPERIENCE

AI Data Annotator & Model Evaluator | Outlier.ai | 2025 – Present

- Perform data QA on Large Language Model (LLM) outputs on the Aether platform, auditing them for factual accuracy, safety compliance, and prompt instruction adherence.
- Classify defects using an error taxonomy, write qualitative reviews, and annotate multimodal text and vision data to improve model quality.

E-Commerce & Digital Storefront Operations | Self-Employed | 2003 – Present

- Manage multi-channel online sales, catalog management, pricing, and order fulfillment across digital marketplace platforms.
- Track inventory turnover across 200+ active listings in Advanced Excel and streamline shipping logistics.

ADDITIONAL EXPERIENCE

- **Personal Shopper / Fulfillment | Instacart | 2020 – Present** — Executed order selection, inventory substitution, and last-mile fulfillment with high customer rating averages.
- **Substitute Teacher | Rapid City Area Schools (2011–2014, 2018–2021)** — Adapted to daily instructional assignments and managed classroom records.

EDUCATION & CERTIFICATIONS

- **Bachelor of General Studies (Emphases: Business, Sociology, Education)** | Black Hills State University (2015)
- **Google Professional Certificates:** Data Analytics (2025), Business Intelligence (2026), AI (2026)
- **Kaggle Certificates:** Intro to Machine Learning (2026), Python (2026)
